

Task 02: Prompting for Creativity – Exploring the Impact of Prompt Structure, Tone, and Few-Shot Prompting on AI-Generated Content

Objective

To explore how different prompting techniques, including basic prompting, detailed prompting, and few-shot prompting, influence the creativity, quality, structure, and detail of AI-generated responses. This task aims to demonstrate how prompt design can guide AI systems to produce more relevant, innovative, and well-structured outputs.

Variant 1: Basic Prompt

Prompt: Generate 5 startup ideas for college students.

Variant 2: Detailed Prompt

Prompt:

You are a successful entrepreneur.

Generate 5 innovative startup ideas for college students.

For each idea include:

- Problem solved
- Solution
- Target users
- Revenue model

Keep the ideas practical and unique.

You are a successful entrepreneur.

Generate 5 innovative startup ideas for college students.

For each idea include:

1. Problem solved
2. Solution
3. Target users
4. Revenue model

Keep the ideas practical and unique.

As an entrepreneur, I look for three things when assessing a campus startup: low capital requirements, a highly concentrated early user base, and a problem the founders understand intimately.

Here are five practical, unique startup ideas designed for college students to build, launch, and scale directly from a dorm room.

directly from a dorm room.

1. Campus Swap: The Tokenized Micro-Barter Network

Most student marketplaces fail because of "cash friction"—students are hesitant to spend actual money on a peer's used items, yet they have valuable goods sitting idle.

- **Problem Solved:** High transaction friction and trust issues in buying/selling used dorm furniture, textbooks, and clothes within a campus ecosystem.
- **Solution:** A closed-loop barter platform utilizing a "credit" system. Students list items they don't need to earn campus tokens, which they then use to "buy" items from others. No real cash changes hands between students for the items, drastically increasing transaction velocity.
- **Target Users:** On-campus residents, specifically freshmen setting up dorms and seniors clearing them out.
- **Revenue Model:**
 - **Freemium:** Users can buy extra tokens with real fiat currency if they want an item but haven't sold enough of their own gear.
 - **Delivery Bounties:** A small cash fee if a user wants to hire a student courier on the platform to move heavy furniture across campus.

2. GradTrack: The Localized Syllabus-to-Calendar Sync

Students spend the first week of every semester manually transferring deadlines from five different, convoluted PDF syllabi into their Google Calendars or Notion setups.

- **Problem Solved:** Disorganization and missed deadlines during "Syllabus Week" due to fragmented, poorly formatted course documents.
- **Solution:** A hyper-local parsing tool where students upload their specific course syllabi. The platform uses optical character recognition (OCR) and LLMs to instantly extract all readings, quizzes, exams, and projects, exporting a flawless, color-coded calendar file tailored to that exact professor's schedule.
- **Target Users:** Overwhelmed undergraduate students, particularly those in STEM or double majors with heavy course loads.
- **Revenue Model:**
 - **B2C Micro-SaaS:** Free for the first 2 syllabi; \$5 per semester for unlimited uploads.
 - **Crowdsourced Bounties:** Pay the first student who uploads a verified, accurate syllabus for a massive lecture class, then sell the perfectly formatted calendar to the rest of the 500-person lecture hall for \$2 each.

Variant 3: Few-Shot Prompt

Prompt:

Example:

Idea: Smart Notes AI

Problem: Students spend hours organizing notes.

Solution: AI automatically summarizes lectures.

Idea: Career Compass

Problem: Students are confused about career choices.

Solution: AI recommends career paths based on skills.

Now generate 5 similar startup ideas for college students using the same format.

Comparison Table:

Variant	Prompting Technique	Tone	Creativity	Detail Level	Structure
Variant 1	Basic Prompt	Simple	Medium	Low	Basic
Variant 2	Detailed Prompt	Professional	High	High	Well-Organized
Variant 3	Few-Shot Prompt	Structured	Very High	Medium-High	Consistent

Final Conclusion:

This task demonstrated that prompt design plays a significant role in determining the quality of AI-generated responses. The basic prompt produced simple and general outputs, while the detailed prompt generated more informative and structured responses by providing clear instructions. The few-shot prompt achieved the highest level of creativity and consistency by using examples to guide the AI's response style. Overall, effective prompt engineering helps users obtain more accurate, detailed, relevant, and creative outputs from AI systems, highlighting the importance of well-crafted prompts in AI interactions.
